MBH Arany Alapok Alapja
(MBH Gold Fund of Funds)

Monthly Fact Sheet – 31 July 2026

www.mbhalapkezelo.hu

Investment policy

The Fund aims to provide its investors with a gold market investment opportunity through which investors can benefit from the performance of gold as an equity market asset while assuming the risks arising from movements in the gold price.

Recommended for

It is a preferred form of investment for investors with a longer-term horizon who wish to invest their capital in an investment whose performance is linked to the performance of gold as a capital market asset, i.e. the market value of gold. Since the value of gold fluctuates significantly from day to day, investors must take on a higher risk than the average in order to obtain a higher return. With the MBH Gold Fund of Funds, investors can benefit from the performance of gold as a precious metal, which can provide a hedge against inflation.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.
Settlement: how long after the purchase / redeemtion order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)
Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).
ISIN: (International Securities Identification Number): a unique international identifier for securities.
Aggregate risk indicator: provides guideance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.
Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.
Portfolio: means the composition and totality of the assets held by investment funds.
Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month .
Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.
Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

Legal disclaimer
