MBH Global Titans Abszolút Hozamú Alapok Alapja
(MBH „Global Titans" Total Return Fund of Funds)

Monthly Fact Sheet – 31 July 2026

www.mbhalapkezelo.hu

Investment policy

The Fund seeks to achieve a positive return independent of the capital market environment and aims to outperform a money market indicator representing a risk-free return, namely the forward-looking return on a 1-year discount bond (DKJ) as determined by the Government Debt Management Agency (ÁKK). The objective of the Fund is to achieve a return in excess of the return provided by government bonds, with the assumption of additional risk, which the Fund Manager intends to achieve primarily through a portfolio of securities in collective investment vehicles. The Fund's objective is capital growth and the results achieved on the investment vehicles will be reinvested in the vehicles defined in the investment policy. The Fund has no specific industry or geographical exposure.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.
Settlement: how long after the purchase / redeemtion order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)
Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).
ISIN: (International Securities Identification Number): a unique international identifier for securities.
Aggregate risk indicator: provides guideance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.
Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.
Portfolio: means the composition and totality of the assets held by investment funds.
Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month .
Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.
Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.
