

MBH investment funds

Monthly fact sheet

Investment policy

The fund's investment objective is to take reasonable equity risks in a flexible manner, while having the core of the portfolio invested in government bonds, thereby achieving superior returns compared to government bonds in the long run. Besides lower-risk government bond investments, the Fund may also invest in assets with a higher degree of risk, and thus a higher return potential, thus enabling it to optimize returns by taking reasonable risks. The Fund is actively managed by allocating between different segments of mainly global bond, equity markets, but the Fund can invest in alternatives like commodities, real estate, etc. as well. The Fund may use derivatives to reduce its risk exposure.

Recommended for

those who want to optimize the return on their long-term investments while taking reasonable equity risks; those who are looking for a flexible, liquid form of investment; those who seek an investment that inherently adapts to different market environments thanks to active management; those who plan to invest multiple times a year, and whose investment size ranges from small amounts up to large sums; those who want to invest their savings in order to achieve long-term goals, typically beyond a 5-year time horizon (eg pension goal; purchase of real estate, big-ticket spending, etc.)

Investment activity

In March we hold local market equity exposure higher than the benchmark weight, we prefer this particular asset class compared to the bond or global equity. Interest rate risk of the Fund is lower than the benchmark, and we diversify the geographical and FX exposure. Non-HUF exposure of the fund was around 15% at the end of the period.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

Investment activity

The Fund's portfolio will be filled with MBH „Adaptive” Total Return Derivative Bond Fund, with a EUR/HUF forward long position matched to its size.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

MBH Aktív Alfa Abszolút Hozamú Származtatott Alap

(MBH „Active Alfa” Total Return Derivative Fund)

Monthly Fact Sheet – 31 March 2025

www.mbalapkezezo.hu

Investment policy

The investment objective of the fund is to achieve higher return than the annual minimum return limit set in the fund's management regulations. The Fund is unconstrained in its investment universe, it can invest in: deposits, equities, debt securities, collective investment securities and derivatives. The Fund is managed in a very flexible, absolute return approach, which means the Fund Manager actively adapts the Fund's holding to the changing market environment. The Fund may use derivatives for optimal portfolio construction.

Recommended for

those who would like to optimize the return on their long-term investments while taking reasonable risks; those who are looking for a flexible and liquid form of investment; those who are looking for a flexible form of investment which is capable to adapt to changing market conditions; those who invest to achieve long-term goals, typically beyond a 5-year time horizon (eg retirement goal; purchase of real estate, etc.)

Investment activity

During the period local equity exposure decreased because of the capital inflow, meanwhile we have increased the duration of the fixed income portfolio tactically. Foreign currency exposure underhedged in the portfolio to Hungarian forint by selling forint. We plan to increase the trading activity in the portfolio because of the overbought equity market and treaty debate.

MBH Rotunda Abszolút Hozamú Származtatott Alap

(MBH „Rotunda” Total Return Derivative Fund)

Monthly Fact Sheet – 31 March 2025

www.mbhalapkezo.hu

Investment policy

The investment objective of the fund is to achieve higher return than the annual minimum return limit set in the fund's management regulations. The Fund is managed actively, in an absolute return approach. The Fund has the capacity to use leverage (and have short positions), which may result in significantly higher risk taking than average absolute return funds. The Fund has no geographical specification and no specific industry exposure. The Fund's potential investment area is as broad as possible: bank deposits and other money market instruments; government or corporate bonds; mortgage bonds, other debt securities; mutual funds, exchange traded funds; domestic and international equities; certificates, derivatives on bonds, foreign exchange, commodities, interest rates, indices and other instruments.

Recommended for

Those who are ready to maximize the long-term return on their investments with high risk-taking; those who are looking for a form of investment that is flexible thereby has the capacity for favourable performance irrespective of the market environment; those who want to make long term savings or achieve long-term goals, beyond a 5-year time horizon (eg pension goal, purchase of real estate, big-ticket spending etc.) as part of a multi-element investment portfolio

Investment activity

In March, the Fund's risk level was nearly 10%, we closed the hedge positions. The largest strategic positions continue to be in the defence sectors and we bought some exposure in the basic resources sector which took a huge hit. We closed our tactical positions last month. In terms of net FX exposure, the Fund ended the month at around 5%, with mostly open positions in european currencies against the HUF.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

Legal disclaimer

More detailed information about the costs related to distribution (purchase, holding, redemption) of investment units, the risks and investment policy of the Fund, is available in the Fund's Prospectus and Management Policy, as well as at the distribution places. Information provided in this document is not exhaustive, so in order to make an well-informed investment decision, please read carefully sections about the Fund's potential risks and detailed terms and conditions in the Fund's Prospectus, Management Policy and Key Investor Information, as well as the actual Fund related sections of the investment services and ancillary services policy of the relevant distributor, and inquire about the cost of registering the investment units in a securities account. Only mutual understanding of these documents and information ensures to make a conscious decision about whether investing into the Fund is in line with the investor's risk tolerance!

The informative documentation is available on the website www.mbhalapkezo.hu and at the distribution places of the relevant distributors.

Investment policy

The Fund's objective is to provide capital growth and higher return over euro deposit rates available in Hungary. The Fund has no preferred geographic allocation focus, and invests significant part of its capital into euro-denominated, short term (typically with maturity of 0-3 years) government bonds or government guaranteed bonds, issued by members states of the European Union specifically. The Fund may also invest in other debt securities, bank deposits and collective investment securities.

Recommended for

Those who are looking for a EUR-denominated medium-term investment; looking for a liquid investment opportunity that is available at any time; those who would like to benefit from a higher return than government securities with a maturity of over a year; those who accept that the higher risk of government securities over one year maturity may cause greater fluctuations in the fund's price

Investment policy

The fund provides an opportunity to share in the performance of commodity and commodity markets. The fund uses indirect investments: it buys collective investment securities, uses commodity and index derivatives, and holds commodity-linked corporate stocks and bonds. The fund offers broadly defined commodity market exposure, including precious metals, industrial metals, rare earths, petroleum derivatives, natural gas, agricultural crops and animals, and more. The Fund Manager follows an active strategy so that the fund can also take sales positions, in which case it can benefit from the fall in prices. The fund may also hold assets in bank deposits, listed shares and debt securities, as well as buy and sell positions in commodity-linked currencies (CAD, AUD, BRL, etc.).

Recommended for

those who want to expand their securities portfolio by investing in commodities; for those who trust in the long-term, favorable performance of commodity markets

MBH Centrál Abszolút Hozamú Származtatott Alap

(MBH „Central” Total Return Derivative Fund)

Monthly Fact Sheet – 31 March 2025

www.mbalapkezezo.hu

Investment policy

The investment objective of the Fund is to exceed the minimum annual return limit set in the Prospectus of the Fund. The objective of the Fund is capital growth. The Fund invests its assets in the hope of achieving a balanced return by investing in assets with the broadest risk profile available. The Fund seeks to use FX, interest rate, derivatives and securities transactions to adjust its positions in line with prevailing market trends and to anticipate them in order to increase the value of the capital invested by unit-holders over the medium term. The Fund has a Central European geographical specification, but no specific industry exposure.

Recommended for

The Fund is intended for investors with a medium-term horizon and a medium risk tolerance, who are not sensitive to the possibility of a few months of unfavourable returns, but who do not wish to follow the markets on a daily basis and reallocate their savings between lower and higher risk assets, leaving this to financial professionals.

Portfolio breakdown

Top holdings over 10%

The fund closed March with a risky asset allocation of around 35% (20% net equity + 15% corporate bonds). Based on the fund's mandate, the largest exposure was to the Central European region, with banking sector stocks dominating. The positive sentiment in the regional markets in February significantly contributed to the fund's good monthly performance. We continue to hedge part of the risk exposure by opening forward sell positions. The fund's foreign exchange exposure was fully hedged to forint.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

Legal disclaimer

More detailed information about the costs related to distribution (purchase, holding, redemption) of investment units, the risks and investment policy of the Fund, is available in the Fund's Prospectus and Management Policy, as well as at the distribution places. Investment policy

The fund's investment objective is to achieve a positive return over the 5-year time horizon recommended for investment and to exceed the minimum annual return limit set in the fund's management regulations. The fund manager implements the investment strategy through active portfolio management and an absolute return strategy, building up a portfolio of several asset classes, the weighting of which is adjusted dynamically according to the market situation and the strategy pursued. The Fund's potential investment universe is as broad and global as possible: bank deposits, equities, bonds, investment funds and derivatives.

Recommended for

For those investors who wish to optimise the return on their long-term investments while taking reasonable risks; who are looking for a flexible form of investment with an acceptable performance even under changing market conditions; who wish to invest their savings in order to achieve long-term goals, typically beyond a 5-year time horizon (e.g. retirement, purchase of real estate etc.)

Based on net asset value/unit, after deduction asset management fee, custody fee and other charges, over one year period annualized yield rates. Yields and performance of past periods do not guarantee future performance of the fund.

Portfolio manager

Szalay Róbert
portfolio manager

He graduated from the College of Finance and Accountancy in Zalaegerszeg in 2000, and completed it with a university degree at the University of West Hungary in 2005. HE holds a CFA Level 1 exam. He gained his professional experience at the Treasury Department of Fundamenta Home Savings Bank, at the Financial Directorate of Budapest Gas Works, and at AXA Insurance Company and its legal predecessors. In 2008 he participated in setting up the investment fund manager of AXA and in launching the fund manager's own funds, and from 2010 he worked in the asset management team of Pannónia (formerly VIT) Pension Fund. He joined Pannónia Investment Services Ltd., the legal predecessor of MBH Fund Management Ltd., in 2012 as a senior liquidity and bond portfolio manager. He currently manages institutional bond and foreign exchange portfolios, as well as emerging bond and absolute return funds.

Investment activity

The exposure of the local banking assets has been decreased during the period. We still keep our exposure to 5-8 year maturities of US dollar and euro-denominated regional government bonds, which we are reducing to achieve higher yields than domestic yields. Our corporate bond exposure is mainly in short-duration foreign currency instruments, which we hedge against currency risk.
