

MBH investment funds

Monthly fact sheet

Investment policy

The fund's investment objective is to take reasonable equity risks in a flexible manner, while having the core of the portfolio invested in government bonds, thereby achieving superior returns compared to government bonds in the long run. Besides lower-risk government bond investments, the Fund may also invest in assets with a higher degree of risk, and thus a higher return potential, thus enabling it to optimize returns by taking reasonable risks. The Fund is actively managed by allocating between different segments of mainly global bond, equity markets, but the Fund can invest in alternatives like commodities, real estate, etc. as well. The Fund may use derivatives to reduce its risk exposure.

Recommended for

those who want to optimize the return on their long-term investments while taking reasonable equity risks; those who are looking for a flexible, liquid form of investment; those who seek an investment that inherently adapts to different market environments thanks to active management; those who plan to invest multiple times a year, and whose investment size ranges from small amounts up to large sums; those who want to invest their savings in order to achieve long-term goals, typically beyond a 5-year time horizon (eg pension goal; purchase of real estate, big-ticket spending, etc.)

Investment activity

In September we hold local market equity exposure higher than the benchmark weight, we prefer this particular asset class compared to the bond or global equity. Interest rate risk of the Fund is lower than the benchmark, and we diversificate the geographical and FX exposure. Non-HUF exposure of the fund increased to 16% with active dollar buying at the end of the period.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

MBH Adaptív Abszolút Hozamú Származtatott Alap

(MBH „Adaptive” Total Return Derivative Fund)

Monthly Fact Sheet – 30 September 2025

www.mbalapkezezo.hu

Investment policy

The investment objective of the fund is to achieve higher return than the annual minimum return limit set in the fund's management regulations by investing in the Hungarian and international bond markets. The Fund focuses on bond investments, managed in a very flexible manner. The feeder fund has the capacity to purchase bonds of any maturity, irrespective of the issuer, issuer rating, fixed or variable interest, position in the capital structure, embedded option. To achieve the optimal portfolio composition, the Fund may hold equities or use derivatives as well.

Recommended for

Those who want to optimise the return on their investments with a reasonable risk-taking, those who seek a flexible and efficient solution for their medium or long-term HUF investments

Investment activity

During the month, we increased the Fund's allocation to government securities denominated in foreign currencies. At the same time, we fully hedged the associated currency exposure in order to preserve the yield advantage while mitigating exchange rate volatility. In light of what we assessed to be an excessively optimistic market sentiment, we took a more cautious stance on interest rate risk by reducing duration exposure. This adjustment reflects our view that the balance of risks favors a more defensive positioning in fixed income. Within equities, we modestly reduced our European exposure and reallocated towards broader global equity markets. This shift enhances diversification and positions the portfolio to benefit from a wider set of growth opportunities beyond the European region. Overall, these adjustments reflect a prudent approach: maintaining participation in risk assets while carefully managing interest rate and currency risks to safeguard the Fund's resilience.

During the period local equity exposure decreased because of the capital inflow and active selling, meanwhile we have decreased the duration of the fixed income portfolio tactically. Foreign currency exposure moved from neutral to HUF short. We plan to increase the trading activity in the portfolio because of the overbought equity market and treaty debate.

MBH Rotunda Abszolút Hozamú Származtatott Alap

(MBH „Rotunda” Total Return Derivative Fund)

Monthly Fact Sheet – 30 September 2025

www.mbalapkezezo.hu

Investment policy

The investment objective of the fund is to achieve higher return than the annual minimum return limit set in the fund's management regulations. The Fund is managed actively, in an absolute return approach. The Fund has the capacity to use leverage (and have short positions), which may result in significantly higher risk taking than average absolute return funds. The Fund has no geographical specification and no specific industry exposure. The Fund's potential investment area is as broad as possible: bank deposits and other money market instruments; government or corporate bonds; mortgage bonds, other debt securities; mutual funds, exchange traded funds; domestic and international equities; certificates, derivatives on bonds, foreign exchange, commodities, interest rates, indices and other instruments.

Recommended for

Those who are ready to maximize the long-term return on their investments with high risk-taking; those who are looking for a form of investment that is flexible thereby has the capacity for favourable performance irrespective of the market environment; those who want to make long term savings or achieve long-term goals, beyond a 5-year time horizon (eg pension goal, purchase of real estate, big-ticket spending etc.) as part of a multi-element investment portfolio

Investment policy

The Fund's objective is to provide capital growth and higher return over euro deposit rates available in Hungary. The Fund has no preferred geographic allocation focus, and invests significant part of its capital into euro-denominated, short term (typically with maturity of 0-3 years) government bonds or government guaranteed bonds, issued by members states of the European Union specifically. The Fund may also invest in other debt securities, bank deposits and collective investment securities.

Recommended for

Those who are looking for a EUR-denominated medium-term investment; looking for a liquid investment opportunity that is available at any time; those who would like to benefit from a higher return than government securities with a maturity of over a year; those who accept that the higher risk of government securities over one year maturity may cause greater fluctuations in the fund's price

Investment activity

The proportions of short term Western European T-bills, term and sight deposits are allocated dynamically based on yield opportunities, rate expectations. The fund's objective is capital accumulation with low volatility, duration stands below 0.1 year for cautionary purposes. The fund has no exposure to Hungarian bonds or T-bills.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

MBH Bonitas Dollár Kötvény Alap

(MBH Bonitas Dollar Bond Fund)

Monthly Fact Sheet – 30 September 2025

www.mbalapkezezo.hu

Investment policy

The Fund's objective is to provide capital growth and higher return over dollar deposit rates available in Hungary. The Fund has no preferred geographic allocation focus, and invests significant part of its capital into dollar-denominated, short term (typically with maturity of 0-3 years) government bonds or government guaranteed bonds, issued by members states of the European Union and the United States of America specifically. The Fund may also invest in other debt securities, bank deposits and collective investment securities.

Recommended for

Those who are looking for a USD-denominated medium-term investment; looking for a liquid investment opportunity that is available at any time; those who would like to benefit from a higher return than government securities with a maturity of over a year; those who accept that the higher risk of government securities over one year maturity may cause greater fluctuations in the fund's price

Investment policy

The fund provides an opportunity to share in the performance of commodity and commodity markets. The fund uses indirect investments: it buys collective investment securities, uses commodity and index derivatives, and holds commodity-linked corporate stocks and bonds. The fund offers broadly defined commodity market exposure, including precious metals, industrial metals, rare earths, petroleum derivatives, natural gas, agricultural crops and animals, and more. The Fund Manager follows an active strategy so that the fund can also take sales positions, in which case it can benefit from the fall in prices. The fund may also hold assets in bank deposits, listed shares and debt securities, as well as buy and sell positions in commodity-linked currencies (CAD, AUD, BRL, etc.).

Recommended for

those who want to expand their securities portfolio by investing in commodities; for those who trust in the long-term, favorable performance of commodity markets

MBH Centrál Abszolút Hozamú Származtatott Alap

(MBH „Central” Total Return Derivative Fund)

Monthly Fact Sheet – 30 September 2025

www.mbhalapkezo.hu

Investment policy

The investment objective of the Fund is to exceed the minimum annual return limit set in the Prospectus of the Fund. The objective of the Fund is capital growth. The Fund invests its assets in the hope of achieving a balanced return by investing in assets with the broadest risk profile available. The Fund seeks to use FX, interest rate, derivatives and securities transactions to adjust its positions in line with prevailing market trends and to anticipate them in order to increase the value of the capital invested by unit-holders over the medium term. The Fund has a Central European geographical specification, but no specific industry exposure.

Recommended for

The Fund is intended for investors with a medium-term horizon and a medium risk tolerance, who are not sensitive to the possibility of a few months of unfavourable returns, but who do not wish to follow the markets on a daily basis and reallocate their savings between lower and higher risk assets, leaving this to financial professionals.

Investment activity

The fund closed September with a risky asset allocation of around 40% of the NAV (20% net equity + 20% corporate bonds). Based on the fund's mandate, the largest exposure was to the Central European region, with banking sector stocks dominating. We have used the positive environment of the markets in September to decrease the equity exposure of the fund. The fund's foreign exchange exposure was fully hedged to forint.

MBH PB TOP Abszolút Hozamú Származtatott Alap

(MBH „PB TOP” Total Return Derivative Fund)

Monthly Fact Sheet – 30 September 2025

www.mbalapkezezo.hu

Investment policy

The fund's investment objective is to achieve a positive return over the 5-year time horizon recommended for investment and to exceed the minimum annual return limit set in the fund's management regulations. The fund manager implements the investment strategy through active portfolio management and an absolute return strategy, building up a portfolio of several asset classes, the weighting of which is adjusted dynamically according to the market situation and the strategy pursued. The Fund's potential investment universe is as broad and global as possible: bank deposits, equities, bonds, investment funds and derivatives.

Recommended for

For those investors who wish to optimise the return on their long-term investments while taking reasonable risks; who are looking for a flexible form of investment with an acceptable performance even under changing market conditions; who wish to invest their savings in order to achieve long-term goals, typically beyond a 5-year time horizon [e.g. retirement, purchase of real estate etc.]

In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

Legal disclaimer

More detailed information about the costs related to distribution (purchase, holding, redemption) of investment units, the risks and investment policy of the Fund, is available in the Fund's Prospectus and Management Policy, as well as at the distribution places. Information provided in this document is not exhaustive, so in order to make an well-informed investment decision, please read carefully sections about the Fund's potential risks and detailed terms and conditions in the Fund's Prospectus, Management Policy and Key Investor Information, as well as the actual Fund related sections of the investment services and ancillary services policy of the relevant distributor, and inquire about the cost of registering the investment units in a securities account. Only mutual understanding of these documents and information ensures to make a conscious decision about whether investing into the Fund is in line with the investor's risk tolerance!
