Monthly fact sheet

MBH Dollár Rövid Kötvény Alap

(MBH Dollar Short Term Bond Fund)

Monthly Fact Sheet – 31 March 2025

www.mbalapkezezo.hu

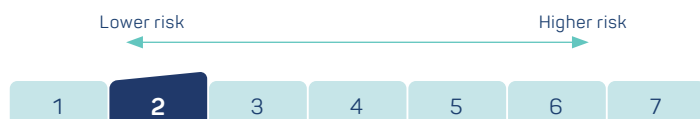

Investment policy

The fund's objective is to offer attractive risk/return profile investment opportunities to its investors by investing in typically short- and medium-term bonds, interest-bearing investment instruments, or ETFs and investment funds providing such exposures, in emerging and developed markets. The fund's bond investments primarily target corporate bonds in both developed and emerging markets, but mortgage-backed securities and government bonds may also be included in the investments. The portfolio includes significant weightings of both investment grade bonds and higher-risk (high-yield) bonds. In addition to bonds, the fund may also invest in other interest-bearing instruments and deposits. The bondholder can take on other interest rate exposures through direct investments by the Fund or indirectly through ETFs or investment funds.

Recommended for

The Fund primarily offers investment opportunities for investors seeking medium-risk investment opportunities providing dollar exposure. The profile of the typical investor of the Fund: an investor who tolerates higher risks in corporate bonds (especially in the so-called high yield category) and emerging markets, seeking flexible investment formats and aiming to invest for a medium-term horizon (minimum of 3 years).

Aggregate risk indicator

Recommended investment horizon

Performance

	3 months	6 months	1 year	3 years	5 years	Since launch date	2024	2023	2022	2021	2020
Fund	1.70%	2.13%	4.84%	4.29%	4.06%	2.62%	4.22%	10.49%	-11.74%	1.89%	0.65%

Based on net asset value/unit, after deduction asset management fee, custody fee and other charges, over one year period annualized yield rates. Yields and performance of past periods do not guarantee future performance of the fund.

Portfolio manager

He graduated from the University of Pécs in finance in 2017, then started his professional career at Citibank in the field of controlling. In 2022, he obtained CFA certification. From 2019, he traded bonds and interest rate derivatives as the primary distributor at OTP Bank. In June 2024, he joined MBH Fund Management, where he is responsible for managing several bonds as well as a mixed fund.

Investment activity

Overall, the fund performed well in March. With growth fears rising, demand increased for short term bonds. I keep the above benchmark duration.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

Investment policy

The investment objective of the Fund is to achieve returns that exceed the yield typically available in global bond markets by investing primarily in investment-grade, long-term corporate bonds issued on developed markets, and interest-bearing investment instruments. To achieve the investment objective of the Fund, the capital collected during distribution is invested primarily in investment-grade corporate bonds and other interest-bearing instruments with typically remaining average maturities (duration) between 5-8 years and issued on developed and, to a lesser extent, emerging markets. Along with corporate bonds, the Fund may also invest in mortgage bonds, government securities, and other securities representing credit relationships. In addition to bonds, the Fund may also invest in other interest-bearing instruments and deposits. The Fund's exposure can also be taken through derivative instruments. The Fund directly or indirectly invests in corporate bonds and government securities by purchasing investment units or ETFs through collective investment instruments. The Fund may hold assets denominated in various currencies, which can be hedged using derivative transactions.

Recommended for

The Fund primarily offers investment opportunities for investors seeking moderately risky dollar investments. The typical profile of investors interested in the Fund includes: - investors with a medium risk appetite - investors looking for investment opportunities denominated in foreign currency - investors seeking long-term investment formats - investors looking to invest for medium to long-term horizons (3-5 years).

Investment policy

The fund's objective is to achieve the highest return for those who invested in the fund, with reasonable risk-taking by benefiting of the equity market trends. The fund holds its assets mainly in equities, to a smaller extent government bonds and other fixed income assets. Within investments the fund aims to achieve the highest return with reasonable risk-taking. The fund aims to invest its assets in a diversified manner in the international stock market to achieve or exceed the average market performance.

Recommended for

For those with longer investment perspective, who would like to achieve higher returns while taking above-average risk, who in a simply way and cost efficiently would like to benefit from the performance of the global developed stock markets by investing in the fund. The minimum investment period recommended by the Fund Management Co. is 5 years.

Investment policy

The fund provides an opportunity to directly benefit of the performance of the North American, especially US equity market. For this reason the fund tracks the generally used Standard & Poor 500 index, often referred as S&P500, composed of the 500 biggest US company shares by market capitalization. The stocks composing the index are traded both on NYSE and the NASDAQ. The fund primary invests its assets in funds, mainly so called exchange traded funds (ETF) and/or equities and also derivative futures tracking the S&P500 stock index.

Recommended for

For those with longer investment perspective, who would like to achieve higher returns while taking above-average risk, who in a simply way and cost efficiently would like to benefit from the performance of the world most developed economy's stock index performance, the S&P500 index composed of the biggest 500 US company shares. The recommended minimum investment period is 5 years.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

The Fund Manager is MBH Alapkezelő Zrt. (number of supervisory licence: **H-EN-III-22/2022**), Chief Distributor of the Fund is MBH Bank Nyrt. (number of supervisory licence: H-EN-I-57/2023., member of the Budapest Stock Exchange).

Investment policy

The fund's investment goal is to achieve capital growth by taking low risk, as well as competitive return with HUF deposit interest rates available in Hungary. The Fund's assets are primarily invested in bank deposits, government securities issued by the Hungarian State, treasury bills, government bonds, state-guaranteed and central bank-eligible securities. Depending on the current yield environment, it can invest in fixed or variable interest rate bonds, as well as shorter or longer term deposits.

Recommended for

For those investors who want to place their savings for at least 6 months with low risk.

Investment activity

During the month, the fund held its investments in time deposits of various maturities, interest-bearing current accounts, MNB discount bills and floating rate government bonds. The portfolio also held Treasury bills denominated in foreign currency combined with FX hedge to achieve a more favorable return than domestic money market returns.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

(MBH „Base” Domestic Short Term Bond Fund)

Monthly Fact Sheet – 31 March 2025

www.mbalapkezo.hu

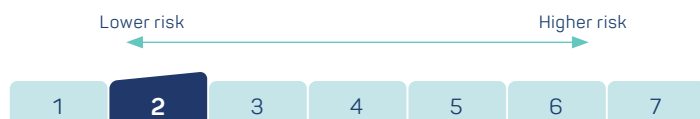

Investment policy

The Fund's objective is to provide a competitive return for the investors with a low risk profile. The Fund Manager's primary objective in investing the Fund's assets is safety, but it seeks to achieve real capital appreciation in addition to value preservation. The Fund invests its assets primarily in government securities, treasury bills, government bonds, government guaranteed and central bank eligible securities and bank deposits issued by the Hungarian State. Depending on the prevailing interest rate conditions, the Fund Manager determines the proportion of short- and long-term, fixed- and variable-rate securities and schemes in such a way as to ensure the highest possible return for investors while ensuring a low volatility of the increase in the net asset value. In constructing the portfolio, the Fund Manager will also pay particular attention to ensuring that the overall interest rate risk of the Fund remains moderate.

Recommended for

For those investors who want to place their savings for at least 1 year with low risk.

Investment policy

The Fund's objective is to provide investors with a return that outperforms money market instruments, primarily by taking advantage of the opportunities offered by bonds issued by the Hungarian Government. The Fund may also invest a part of its portfolio in government bonds of other countries, as well as in mortgage bonds, corporate bonds and bonds of international financial institutions, in order to achieve a better risk/return profile.

Recommended for

The fund is recommended for investors with a medium-term horizon - at least 2 years - who are looking for an investment that outperforms the Hungarian bond market and outperforms Hungarian inflation. Recommendation: this fund may not be suitable for investors who want to withdraw their money from the fund within 2 years.

Investment policy

The Fund aims to provide investors with diversified investments with an attractive risk/return profile and exposure to equity markets, investing predominantly in developed European equity markets. The Fund takes exposure to developed European equities through direct investments (i.e. by buying individual equities) or indirectly (i.e. typically through ETFs, investment funds or derivatives). Within the Fund, the weighting of investments providing direct and indirect equity market exposure may vary freely, taking into account, inter alia, the portfolio manager's market expectations and cost-efficient portfolio management considerations. The weighting of investments with indirect equity market exposure within the Fund is expected to be between 75% and 95% on average over a longer time horizon. Within the developed European equity markets, equities from the UK, France, Germany, Switzerland, the Netherlands, Sweden, Spain, Denmark, Italy, Finland and the Netherlands, are the dominant countries.

Recommended for

The Fund may be an advantageous investment for investors with a longer-term horizon, who are willing to take higher than average risk in the hope of higher returns, and who wish to benefit from the performance of the leading companies in the developed European equity markets and their returns through a single investment fund. The fund does not have industry specificity.

Information provided in this document is not exhaustive, so in order to make an well-informed investment decision, please read carefully sections about the Fund's potential risks and detailed terms and conditions in the Fund's Prospectus, Management Policy and Key Investor Information, as well as the actual Fund related sections of the investment services and ancillary services policy of the relevant distributor, and inquire about the cost of registering the investment units in a securities account. Only mutual understanding of these documents and information ensures to make a conscious decision about whether investing into the Fund is in line with the investor's risk tolerance!

The informative documentation is available on the website www.mbhalapkezo.hu and at the distribution places of the relevant distributors.

This document is a marketing communication material according to 55 of Section (1) Paragraph 4 of the Act on Collective Investment Trust and Their Managers, and on the Amendment of Financial Regulations, but does not mean any offer for distribution, and is not an investment- or a taxing advice.

The Fund Manager is MBH Alapkezelő Zrt. (number of supervisory licence: **H-EN-III-22/2022**), Chief Distributor of the Fund is MBH Bank Nyrt. (number of supervisory licence: H-EN-I-57/2023., member of the Budapest Stock Exchange).

Investment policy

The objective of the Fund is to provide the highest possible return to the investors by taking advantage of the price movements in the equity markets, while taking the risks that the Fund Manager considers reasonable. The Fund Manager intends to invest the assets of the Fund primarily in equities and, to a lesser extent, in a mix of government bonds and other interest-bearing securities. It will invest with a view to taking reasonable risks and to obtaining the highest return. The financial objective of the Fund is to invest its capital diversified across Hungarian and/or international equity markets to achieve or exceed the average market returns available. The objective of the Fund is capital growth. The Fund has a geographical diversification, but no specific industry exposure.

Recommended for

It is a preferred form of investment for investors with a longer-term horizon, who are willing to take higher than average risks in the hope of higher returns. The recommended minimum investment period is 5 years.

The Austrian bourse (and especially the bank shares) got a smaller hit in March but overall the regional equities closed the month higher. There was a rather strong capital inflow to our fund and we tried to track it with our positioning, and remained in a slight overweight. Overall, we underweight the Romanian stocks while we hold a significant overweight towards the CEE banks.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

MBH Feltörekvő Piaci Részvény Alap

(MBH Emerging Market Equity Fund)

Monthly Fact Sheet – 31 March 2025

www.mbalapkezeslo.hu

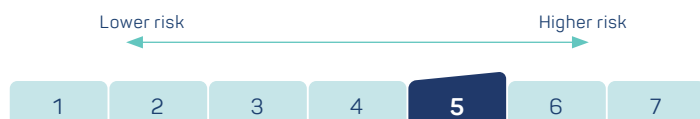

Investment policy

The objective of the Fund is to provide the highest possible return to the investors by taking advantage of the price movements in the equity markets, while taking the risks that the Fund Manager considers reasonable. The Fund Manager intends to invest the assets of the Fund primarily in equities and, to a lesser extent, in a mix of government bonds and other interest-bearing securities. The Fund shall seek to invest in a manner that involves a reasonable degree of risk and to achieve the highest possible return. The Fund's financial objective is to invest its capital diversified across Hungarian and/or international equity markets to achieve or exceed the average market returns available. The objective of the Fund is capital growth.

Recommended for

It is a preferred form of investment for investors with a longer-term horizon, who are willing to take higher than average risks in the hope of higher returns. The recommended minimum investment period is 5 years.

MXFS LN

Investment activity

The size of the Fund stagnates during the month. The inflow of capital kept the Fund slightly below the benchmark during the month, with equity exposure under 90%. The foreign currency exposure taken on was not hedged, which contributed negatively to the portfolio's performance over the period. During December, the MBH EMEA Equity Fund was merged into the Fund.

MBH Paradigma Abszolút Hozamú Származtatott Alap

(MBH „Paradigma” Total Return Derivative Fund)

Monthly Fact Sheet – 31 March 2025

www.mbalapkezezo.hu

Investment policy

The Fund aims to provide its investors an attractive investment alternative with an attractive risk-return profile through an appropriate mix of risky and safe investments. The Fund's objective is to outperform money market funds over a 2-year time horizon, with a higher return than money market funds but lower risk than pure equity funds. The Fund Manager aims to invest the assets of the Fund in a manner that is reasonable in terms of risk and to achieve the highest possible return, in terms of interest, capital gains and dividend income. Within the assets permitted by the Fund's investment policy, the Fund Manager intends to invest primarily in government securities, corporate bonds, equities and exchange traded funds (ETFs), money market instruments and other interest-bearing securities. The Fund Manager may also enter into derivative transactions. The objective of the Fund is capital growth. The Fund has no geographical specification or specific industry exposure.

Recommended for

We recommend the fund to investors with a medium to longer-term horizon and a medium risk tolerance, who would like to achieve a higher return on their invested capital than deposits and money market investments over a 2-year period, but are not sensitive to possible negative returns for a few months, and do not wish to follow the markets on a daily basis and reallocate their savings between lower and higher risk assets, but would prefer to leave this to financial professionals.

HUNGARIAN FORINT

Investment activity

The goal of the fund is capital growth, and in order to achieve this, the Fund Manager follows an absolute return strategy. A significant part of the fund's portfolio continues to consist through the use of derivative instruments—of exposures that typically take advantage of the high short-term domestic interest rate levels. By hedging the currency risk of bonds predominantly issued in foreign currencies and at the same time benefiting from the high carry, the fund maintains a low-volatility position that delivers a return higher than money market yields. In March, to offset the particularly poor performance of the bond market, I increased the size of the short HUF position. However, the previous correlation worked in the opposite way this time: bonds fell, while the forint strengthened. Another loss-making position was due to the weakening of the Turkish lira and bonds, caused by political events in Turkey. However, I believe that the high carry and current geopolitical developments justify maintaining the Turkish exposure. I kept the long position in 2-year U.S. Treasuries.

MBH Kontroll Abszolút Hozamú Származtatott Alap

(MBH „Kontroll” Total Return Derivative Fund)

Monthly Fact Sheet – 31 March 2025

www.mbalapkezezo.hu

Investment policy

The Fund invests its assets in the hope of achieving a balanced return, taking moderate currency risks and investing in the broadest risk profile available. The Fund takes or may take a significant part of its currency risk exposure through exchange-traded and OTC derivative contracts. The Fund's strategic objective is to provide returns competitive with money market funds in all capital market environments over a 3-year horizon. The Fund seeks to use currency, interest rate and securities transactions, in addition to derivative transactions, to develop its positions in line with prevailing market trends and to anticipate them in order to enhance the value of the capital invested by its investors over the medium term. The Fund may also take leveraged positions up to the limit set for derivative funds in the legislation and may take net short positions. The Fund therefore runs a different risk from the average. The Fund Manager undertakes to select for the Fund, with a high degree of freedom, the instruments which it considers to be a good investment in the given market environment.

Recommended for

We recommend the fund to investors with a medium risk tolerance who wish to achieve a return on their invested capital over a 3-year period in excess of the return on deposits and money market investments, but who are not sensitive to possible adverse returns for a few months, and who do not wish to follow the markets on a daily basis and accordingly reallocate their savings from the money and bond markets to the equity markets and back, but would prefer to entrust this to financial professionals. The recommended minimum investment period is 3 years.

2028/A MÁK

Investment activity

The Fund performed well in March again, approaching its all-time high. The good performance was mainly due to the put options taken on the US stock market, and the individual Polish stock longs also worked well in March. By the end of the month, I closed the US short positions, and even increased the equity exposure to close to 30% with futures positions on the US index. Within bonds, I bought 28/A paper, so the Fund still only has exposure to the short end of the yield curve. The Japanese yes long has been closed against the dollar.

MBH Global Titans Abszolút Hozamú Alapok Alapja

(MBH „Global Titans” Total Return Fund of Funds)

Monthly Fact Sheet – 31 March 2025

www.mbalapkezo.hu

Investment policy

The Fund seeks to achieve a positive return independent of the capital market environment and aims to outperform a money market indicator representing a risk-free return, namely the forward-looking return on a 1-year discount bond (DKJ) as determined by the Government Debt Management Agency (ÁKK). The objective of the Fund is to achieve a return in excess of the return provided by government bonds, with the assumption of additional risk, which the Fund Manager intends to achieve primarily through a portfolio of securities in collective investment vehicles. The Fund's objective is capital growth and the results achieved on the investment vehicles will be reinvested in the vehicles defined in the investment policy. The Fund has no specific industry or geographical exposure.

Recommended for

The Fund is intended for investors with a medium-term horizon who are willing to take on above-average risk in order to achieve a higher return.

Investment activity

The Fund rose again in March, which was mainly due to external funds, their average performance was 1.5%. MBH funds lost an average of 45 basis points in their value.

Glossary

Unit Price (Net Asset Value per Unit): shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

Settlement: how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

Investment period: the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

ISIN: (International Securities Identification Number): a unique international identifier for securities.

Aggregate risk indicator: provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

Net asset value: the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

Portfolio: means the composition and totality of the assets held by investment funds.

Standard deviation: the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month.

Sharpe ratio: the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

Max Drawdown Indicator: Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.

Legal disclaimer

More detailed information about the costs related to distribution (purchase, holding, redemption) of investment units, the risks and investment policy of the Fund, is available in the Fund's Prospectus and Management Policy, as well as at the distribution places. Information provided in this document is not exhaustive, so in order to make an well-informed investment decision, please read carefully sections about the Fund's potential risks and detailed terms and conditions in the Fund's Prospectus, Management Policy and Key Investor Information, as well as the actual Fund related sections of the investment services and ancillary services policy of the relevant distributor, and inquire about the cost of registering the investment units in a securities account. Only mutual understanding of these documents and information ensures to make a conscious decision about whether investing into the Fund is in line with the investor's risk tolerance!

The informative documentation is available on the website www.mbhalapkezes.hu and at the distribution places of the relevant distributors.

This document is a marketing communication material according to 55 of Section (1) Paragraph 4 of the Act on Collective Investment Trust and Their Managers, and on the Amendment of Financial Regulations, but does not mean any offer for distribution, and is not an investment- or a taxing advice.

The Fund Manager is MBH Alapkezelő Zrt. (number of supervisory licence: **H-EN-III-22/2022**), Chief Distributor of the Fund is MBH Bank Nyrt. (number of supervisory licence: H-EN-I-57/2023., member of the Budapest Stock Exchange).

Investment policy

The Fund aims to provide its investors with a gold market investment opportunity through which investors can benefit from the performance of gold as an equity market asset while assuming the risks arising from movements in the gold price.

Recommended for

It is a preferred form of investment for investors with a longer-term horizon who wish to invest their capital in an investment whose performance is linked to the performance of gold as a capital market asset, i.e. the market value of gold. Since the value of gold fluctuates significantly from day to day, investors must take on a higher risk than the average in order to obtain a higher return. With the MBH Gold Fund of Funds, investors can benefit from the performance of gold as a precious metal, which can provide a hedge against inflation.

Aggregate risk indicator

Recommended investment horizon

Performance

	3 months	6 months	1 year	3 years	5 years	Since launch date	2024	2023	2022	2021	2020
	Periodic yield		Annualized yield			Calendar year performance					
Fund	15.90%	16.03%	34.60%	18.27%	13.72%	3.57%	25.52%	19.15%	1.36%	-6.32%	17.19%

Based on net asset value/unit, after deduction asset management fee, custody fee and other charges, over one year period annualized yield rates. Yields and performance of past periods do not guarantee future performance of the fund.

Portfolio manager

Czipra Gábor
portfolio manager

He graduated from the Corvinus University of Budapest with a degree in finance in 2007, then started his professional career at Aegon Fund Management as a junior portfolio manager, and later as an active bond manager in insurance and fund asset management at the national and regional level. From the beginning of 2012, he continued at Takaréknál Fund Management as an investment manager. He joined the team of MKB Investment Fund Management at the beginning of 2016, where he was responsible for managing bond and absolute yield portfolios, and is currently performing this activity as a member of the MKB-Pannónia Fund Management team. In the 2019 Privátbankár.hu Klasszis professional competition, the funds managed by it took first place: in the Best Absolute Yield Non-Derivative Fund and Best Advanced Market Equity Fund categories.
